English: C2 Proficient (EF SET / Bilingual) Timezone: CLT / UTC-3 (Full US / CA Overlap & 5h EU) Available for Remote B2B / Contractor / EOR

PROFESSIONAL SUMMARY

Senior / Staff Full-Stack Software Engineer with 14+ years of experience designing, building, and operating high-availability production software across retail, e-commerce, and distributed backend platforms. Deep expertise across the entire stack: from modern cloud-native microservices (**Node.js, Go, Java, GCP, Kubernetes, Pub/Sub**) to legacy enterprise modernization (**PHP/Symfony/Yii2, SQL** to event-driven architectures). Led personalization platforms serving **millions of users across 5 Latin American countries** and engineered mission-critical backend services for the region's largest retail conglomerate. Proven track record in resilience engineering (sub-100ms p99 latency, zero-downtime migrations) and bilingual collaboration (English C2).

CORE COMPETENCIES

- Distributed Systems & Microservices (GCP / K8s / Cloud Run)
- Full-Stack Development (Node.js, Go, Java, PHP → React, Angular)
- High-Throughput Messaging (Pub/Sub, Idempotency, Backpressure, DLQ)
- High-Volume Production Platforms (5 LATAM Countries)
- Database Engineering: PostgreSQL (sub-100ms p99), MySQL, MS SQL
- End-to-End Observability (Datadog 50+ services, Traces, Metrics)
- Legacy Modernization & Cloud Migrations (Zero-Downtime, GCP / Azure)
- CI/CD, GitOps, Docker & Container Orchestration

WORK EXPERIENCE

- Senior Backend Engineer** — [Falabella \(FTC\)](#)

Dec 2024 – Feb 2026

Remote • High-Volume Retail & E-Commerce Platform

 - Architected, deployed, and operated high-availability microservices using **Node.js, Go, and Java** hosted on **GCP (Cloud Run, Kubernetes, Pub/Sub)**.
 - Engineered high-throughput event processing pipelines processing **millions of coupons and promotions events daily across 2 LATAM countries**, implementing distributed idempotency keys, exponential backoff, and dead-letter queues (DLQ).
 - Implemented strict rate limiting and backpressure controls on Pub/Sub consumer worker pools, eliminating cascade failures and safeguarding downstream services during peak retail traffic events.
 - Operated and optimized **PostgreSQL at enterprise scale** using connection pooling, read replicas, and query execution plan tuning, maintaining latency under heavy concurrency.
 - Designed centralized observability dashboards, alerts, and APM tracing in **Datadog**; participated in primary Tier-1 on-call incident response for critical retail flows.
- Senior Software Engineer** — [Sodimac / Retail Digital Corp](#)

Jun 2022 – Dec 2024

Remote • Regional E-Commerce Personalization Engine

 - Led technical execution of the regional personalization platform serving customer traffic across **5 LATAM countries**, building robust A/B testing infrastructure with statistically sound variant routing and conversion metrics.
 - Engineered reusable client-side modules and frontend libraries in **JavaScript/TypeScript and Dynamic Yield**, seamlessly integrated with backend recommendation and catalogue APIs.
 - Partnered across engineering, product management, and data science teams to iterate on machine-learning-driven personalization features, delivering measurable top-line revenue uplift.
- Full Stack Developer** — [Transparentia SpA](#)

Oct 2020 – Jun 2022

Remote • Enterprise Workflow & Governance Systems

 - Delivered end-to-end full-stack solutions using **PHP (Yii2), MS SQL, and MySQL** for mission-critical corporate management platforms.
 - Executed a seamless, complete cloud infrastructure migration from **GCP to Azure** (virtual machines, managed SQL databases, virtual networks, and CI/CD pipelines).
 - Maintained legacy applications while shipping modern modular features, completing a **zero-downtime cutover** for active enterprise production workloads.

- Sole lead engineer responsible for end-to-end design, development, and hosting of all institutional platforms (**PHP, MySQL, Symfony, jQuery, Highcharts, AWS/ECS**).
- Engineered and operated a high-security digital voting platform for CIO/CPO executive clubs; managed Linux/Apache servers, domain infrastructure, and SVN/Git repositories.
- Designed and tuned complex relational schemas and SQL queries powering analytical executive reporting dashboards.

- Taught evening undergraduate computer science classes: Basic Computing, Computing I, and Applied Computing Workshop.

- Database development and technical maintenance for Indigenous Development Infrastructure Projects in Temuco.

OPEN SOURCE & FEATURED PROJECTS

Pokengular • Angular, Pollinations.ai (Flux AI), BYOP Flow
Experimental Angular application fusing Pokémon attributes and generating generative AI images of hybrid creatures in real time.

GameDeals - ITAD • Angular (Standalone Components, Signals, RxJS), IsThereAnyDeal API
High-performance web application tracking 100% discounted game deals leveraging modern Angular Signals and reactive streams.

SetlistApp • Angular, iTunes Search API, Google Drive API
Musician setlist manager with drag-and-drop song ordering, dynamic duration calculation, and automated cloud sync with Google Drive.

EDUCATION

Civil Engineering in Computer Science
INACAP (Temuco, Chile) • 2011

Computer Science Engineering
INACAP (Temuco, Chile) • 2010

Programmer Analyst
INACAP (Temuco, Chile) • 2008

CERTIFICATIONS & LANGUAGES

EF SET English – C2 Proficient (EF Education First, 2024)
Bilingual professional working proficiency

TOEIC (930 / 990) – ETS (2017)

Google Cloud: Monitor and Log with Cloud Operations Suite (2023)

Docker – Docker Inc. (2023) • Kubernetes – LinkedIn (2023)

React Foundations for Next.js – Vercel (2023)

TECHNICAL SKILLS

Languages & Runtimes: JavaScript (ES6+), TypeScript, Node.js, PHP (8.x, 7.x), Go (Golang), Java, SQL, HTML5, CSS3/Sass

Cloud & Infrastructure: Google Cloud Platform (GCP — Cloud Run, Pub/Sub, GKE/Kubernetes, Cloud Storage), AWS (ECS), Azure, Docker, Datadog (APM/Metrics), CI/CD (GitLab CI, GitHub Actions), GitOps, Linux/Apache

Frameworks & Libraries: React, Angular, Symfony, Yii2, Express.js, Dynamic Yield, RxJS, Material UI, Bootstrap, Highcharts

Databases & Architecture: PostgreSQL, MySQL, MS SQL Server, Redis, Microservices, Event-Driven Architecture, REST APIs, GraphQL, Message Queues (DLQ/Idempotency), Zero-Downtime Cloud Migrations
